Computrition's Hospitality Suite XChange Gateway

Universally Changing the Breadth of Data Exportation and Availability

What is the XChange Gateway?

More and more, enterprise class application users seek to provide endpoint integration into both their core products as well as ancillary systems. With the wealth of data captured in these systems, there is often the need to pass data between and amongst them to allow for deep integration and a true reduction in manual processes. The XChange Gateway provides a mechanism to both mine data from and update information within Hospitality Suite® (HS) on a real-time basis to and from various third party software systems (HS is composed of the Nutrition Care Management, Foodservice Operations Management, and SuitePoint! Point-of-Sale modules). This is done seamlessly, from machine to machine, without the end user having to start a batch process or concern him or herself as to how the data is structured or updated.

There are many products in the marketplace which claim to be the solution for application interoperability. Unlike many of these products, Computrition's XChange Gateway is truly vendor neutral. Utilizing industry standard XML, we offer open integration that allows for the ability to transfer data between Hospitality Suite and any preferred vendor. Computrition's Gateway solution is not dependant on third party middleware products and is supported and updated with every Hospitality Suite release.

The Hospitality Suite XChange Gateway is the perfect complement to Hospitality Suite to meet all your data interchange needs!

FOODSERVICE SOFTWARE SOLUTIONS

How Does it Work?

Rather than rely on any third party protocols, the Hospitality Suite XChange Gateway communicates information using Web Service technology via a secure internal intranet, an encrypted private to public network, or the Internet. Computrition's XChange Gateway Products for Hospitality Suite communicate to and from other products through the use of XML formatted messaging. Simply stated, this add-on application provides the most streamlined and accessible mechanism for bi-directional application communication.

Gateway to Enhanced Applications

Computrition's XChange Gateway offers infinite opportunity to extend a greater level of knowledge and services to both end users of the Hospitality Suite application as well as to customers served on a daily basis throughout one's foodservice operation.

XChange Gateway In Action:

- Printing of nutritional analysis on POS receipts
- Present menu offerings in each outlet on corporate website
- Allow customers to make meal selections and review customized nutritional analysis via the Web
- Post dynamic daily menus on digital menu boards generated from Foodservice Operations Management (FOM)
- Create operational analysis dashboards for volume, fiscal and efficiency benchmarking
- Tracking total guest count variances between POS guest checks and forecasted amounts in FOM
- Manage selling price variances between POS or accounting system generated revenues and values listed in FOM
- Export vendor receipt data to an existing accounts payable system
