

Foodservice Operations Management

*Automating Your
Foodservice Operation*

Success in foodservice comes down to three basic components: customer satisfaction, quality of products delivered, and cost. These basic elements should be the focus of an effective software solution. Computrition's Foodservice Operations Management software (FOM) can deliver these dynamics like no other system can.

Computrition has set the industry standard for quality and effectiveness by offering a wide array of products and services that help you efficiently plan, organize, and manage your operations. Our FOM software delivers boundless management features, providing accessibility to valuable information virtually impossible to access in a non-automated environment.

By implementing our system, immediate process improvements allow you to maintain accurate inventory levels, administer effective menu programs, reduce food waste and achieve an overall cost savings. On average, our customers save between 5 to 25% on food and supply costs through cost-control functions that include, but not limited to, reduction in standing inventory, elimination of over- and under-production and just-in-time ordering.

Since implementing the FOM production module, food waste has gone down to 3% and Shea Medical Center has achieved an overall savings of \$750,000-\$800,000

COMPUTRITION
FOODSERVICE SOFTWARE SOLUTIONS

With FOM's Features*, You Have the Ability to...

- Leverage the power of an integrated system that eliminates redundant data entry
- Analyze nutrient information at the food item, recipe, and menu level
- Scale recipe and menu amounts according to production needs
- Implement order entry interfaces with major vendors
- Globally search and replace ingredients in your recipes
- Globally search and replace recipes in your menus
- Update vendor item prices automatically that reflect costs at the food item, recipe, and menu level
- Determine the cost changes of a food item over time
- Ensure proper food handling using the integrated HACCP functionality
- Assign menu total counts to selected menus
- Add ability to print nutrition facts labels for recipes
- Store a history of post meal counts to assist in forecasting future production and order amounts
- Automate perpetual or just-in-time inventory
- Determine inventory values
- Create pullsheets and inventory worksheets
- Track incoming and outgoing requisitions
- Generate purchase orders
- Determine the items to order based on menu requirements
- Confirm orders and generate a report showing discrepancies between what was ordered and what will be received
- Automate a central production/ kitchen environment
- Generate multi-site roll-up reports
- Merge information from a master set of data out to sites
- Customize, filter, and save reports in a variety of formats such as PDF, Excel, and HTML

*Features may vary by module and Computrition, Inc. retains the right to alter configurations of systems offered.
