

MEAL CHOICE CONNECT

Military members have a fast-paced tempo to meet mission and training requirements, which often requires meals on the go. "Quick and easy" usually translates to an on-base franchise option that doesn't provide nutritionally dense choices. Connect your tech-savvy service members to on-base dining facilities that offer Go For Green® and Fueled to Fight™ approved menus.

Having the ability to quickly find meal choices online can serve as a tremendous benefit for both service members and the retail locations they are interested in, helping to drive traffic and increase throughput. Consequently, our armed forces are prepared ahead of time, meaning faster ordering, reduced line queues, and increased revenue!

Computation understands the value of accessing meal choices so that service members stay adequately fueled throughout their busy day. With that in mind, we developed **Meal Choice Connect**, a powerful web-based add-on module that allows individuals to view options at various dining facilities within a base or post from any browser. Service members can easily access daily meal offerings for each meal period, see nutritional information (including recipe allergens, ingredients and nutrients) through full integration with our Hospitality Suite, add item selections to a personalized list, and view total nutritional information for an entire meal selection. After a few clicks in **Meal Choice Connect**, your service members will know exactly what they want to eat and, more importantly, that they don't need to look any further than their dining facilities to get it!

**MAKE YOUR RETAIL AREAS COME
ALIVE ONLINE!**

FEATURES

Easy-to-use landing screen

with each facility and displayable corporate logo

Personalized menu items

that include enticing descriptions for a more creative, restaurant-quality display

Full integration

with our Foodservice Operations Management software, ensuring that recipe allergens and sub ingredients are shown

Supports multi-dataset sites

and allows easy service member navigation between datasets to see menu offerings for their specific location

Utilizes up-to-date FDA nutrition facts format

and allows nutritional content in both normal and USDA label format view

Add, remove, and edit items

on personalized lists that calculate total nutritional information for meal selection

BENEFITS

Browser-based for easy access anywhere

Empowers service members to make healthier meal choices

Reduces line queues by allowing members to view menu offerings in advance

Protects budget by capturing accurate service member data

Utilizes cutting-edge technology

Simplifies the menu selection process with drop-down search filters

Daily or week-at-a-glance view of meal offerings for all site-specific retail areas

Built-in FAQ section for quick assistance with product features

Visible legend enables members to easily find items based on specific diets (e.g., GF - Gluten Free)
