SINGLE
SIGN-ON

As healthcare organizations expand their third-party integrations, healthcare IT must maintain these products to support a site's technical advancement. While incorporating technology can bring about enhanced efficiency, using multiple products often requires multiple logins, which can lead to forgotten passwords, difficulty accessing necessary applications, and overall frustrated users.

Thanks to the **Single Sign-On (SSO)** add-on module, users can enter credentials once and quickly access multiple applications with a simple click thereafter, streamlining the entire login process.

The SSO process is achieved by interoperability with a site's Active Directory that delegates user authentication for our solutions to their central database. In doing so, password policies and user access are maintained by internal IT staff. Thereby increasing security and simplifying processes for system administrators.

MULTIPLE PRODUCTS, ONE AUTHENTICATION!

FEATURES + BENEFITS

Streamline processes
by enhancing workflow

Manage session user authentication
through a hospital's Active Directory

Enter credentials once
for easy access to
multiple applications

Improve productivity
by reducing the amount of
password reset requests

Increase security
with full IT control of password
policies and user access

Leverage Windows operating system
to prohibit anyone removed from the
Active Directory from logging in
